Looking at Amecs response to my comments it appears they are going to proceed with the schedule to shut down steam possibly as early as this week, if they haven't already done so. They did not respond to my comment about how initiation of pressure cycling reduced the rate of NAPL recovery. Removal of NAPL unfortunately wasn't specified, but you would think that achieving goal of benzene below 500 ppb would assure that NAPL was gone, its actually a better measure, and more specific. But now they don't even think they need to meet that criterion. They now say

- Criteria are based on principal of multiple lines of evidence. The criteria will be considered in total with the weight of evidence from these multiple lines being used for decisions. Individual compliance with each criteria is not absolute.

But as we demonstrated they haven't actually achieved any of these criteria expect target temps and that only barely achieved.

Its going to be a long afternoon..... get ready

Carolyn
